SportHiTech Hipshot Tuner Button FAQ's

Hipshot guitar tuners all have interchangeable buttons. Any button can be used on any tuner.

As standard, all open gear tuners (both locking and non-locking) come with the 'Hipshot' button (see 'HH1' below) and all enclosed gear tuners (both locking and non-locking tuners) come with the D07 'mini Schaller' button in the same color as the tuner.

SportHiTech do stock sets with some of the most popular button types pre-mounted, and we stock all the Hipshot add-on buttons individually. If you're buying a set of tuners from us, you get a bundle discount on any add-on buttons you might need. Please email us at sales@sporthitech.com if you have any questions.

Although all the buttons fit all of the tuners, be aware of the distance between tuners when ordering, some buttons are primarily designed for three-per-side and could be too wide on a 6, 7, or 8 inline headstock, for example. As always, we're here to help, so let us know if you have any questions.

A wide range of alternative buttons are available as options, and those are listed here:

Model	Description	Available Colors/Materials
D04	'Tulip' style, usually used on 3x3	Metal – chrome/black/gold

Where can I buy Hipshot buttons?

You can buy any Hipshot product from SportHiTech at www.sporthitech.com. We are an authorized Hipshot distributor and keep Hipshot tuners and buttons in stock at all times. If you prefer you can also buy from us on eBay, on Amazon, or on Reverb.com (not all sets available on all platforms).

How much do tuner buttons weigh?

All weights are for 6 buttons with no screws. Remember to adjust for 7 & 8 string and beyond…
